

IBM Replacement Toner Cartridges and the Climate Change

- Climate change is a serious concern that warrants meaningful action on a global basis to stabilize the atmospheric concentration of greenhouse gases (GHGs).
- All sectors of society, the economy and governments worldwide must participate in solutions to climate change.
- Joint efforts by the private and public sectors to reduce global GHG emissions are extremely important. These initiatives are most effective when they are implemented through market driven mechanisms and are economically efficient, environmentally effective and sustainable.
- A diverse energy portfolio is necessary to achieve an orderly adaptation to a world in which GHG emissions are constrained while maintaining successful economies and secure supplies of energy, and also meeting the needs of humanity.
- Energy conservation must be a cornerstone of climate protection. IBM will continue to conserve energy and continually improve the energy efficiency of its operations, products and services while collaborating with and encouraging its global suppliers to do likewise.
- Consistent with its values, IBM will collaborate with its clients to create new innovations and solutions that are protective of the climate.

IBM has a TLA Agreement with The Turbon Group for the production of these cartridges and to ensure the above policies are followed.

The IBM Replacement Toner Cartridges for HP Laserjet Printers are distributed, manufactured, and sold by the Turbon Group under a TLA Agreement. Turbon is the sole and exclusive provider of warranty and support of this product. Complete product warranty and support information can be found inside the product package.

ENVIRONMENT

**IBM Replacement
Toner Cartridges:
*Climate Protection
and
Energy Saving
Considerations***

Long-standing Commitment

Climate change is one of the most critical global environmental challenges facing the planet. There exists scientific consensus that global warming is occurring and that it is affected by emissions of greenhouse gases (GHGs) related to human activities. Although the understanding of the effects of climate change continues to evolve, climate change could impact the economy and the quality of life for this and future generations.

We do not own the future - we borrow it from our children. The future of our children will depend on the environment they inherit. Clean air and clean places will ensure children live, play and grow healthy.

IBM strives to lead in the invention, development and manufacture of the industry's most advanced information technologies, including the **IBM Replacement Toner Cartridges for HP Laserjet Printers**.

IBM continually focuses on delivering high quality products with exceptional value to our customers.

Climate Protection and Energy Saving

The Turbon Group, IBM's approved partner for the production and distribution of the **IBM Replacement Toner Cartridges**, conducts its supplies recycling program in a manner that is environmentally sound and complies with applicable regulatory requirements. This is consistent with the commitment to corporate citizenship, social responsibility and environmental sustainability.

In order to accomplish this, the IBM Replacement Toner Cartridges recycling policy requires that:

- All recyclable materials from original laser cartridges are recycled to recover their material values and to maximize recovery rates;
- All materials that cannot be recycled are recovered for energy or incinerated to minimize materials to landfill;
- All recycling services are conducted only at approved recycling facilities that comply with all applicable laws and regulations;
- All authorized recycling facilities track and report on cartridges processed in the recycling program;
- All manufacturing and distribution facilities are ISO 14001 certified.

We also help reduce energy consumption by using more energy-efficient transportation and packaging.

Over the past decade, we decreased reliance on air cargo while increasing use of ocean freight.

Furthermore, we pack our products more densely so more units fit into shipping containers.

The entire line of **IBM branded Replacement Toner Cartridges** is manufactured in facilities which are ISO 9001 certified.
